PROJECTS

A Full Stack Project of FOOD TOKEN GENERATOR

🔗 <https://food-token-generator.netlify.app/>

Project Description

- This page is used to Create tokens in the restaurant.
- For Frontend REACT app and for Backend MONGODB is used
- TOKEN + ORDER same will be created in the products page with the help of REDUX.
- To select the food EASILY FILTER SECTION is added in the PRODUCTS PAGE The created tokens will sent to KITCHEN PAGE.
- When the Kitchen team Prepares the dish.
- They Will click ready so these tokens will go to the TOKEN BOARD which will be in the PRODUCTS PAGE .
- Finally after giving the order to the person ,admin has the access to remove the token from the TOKEN BOARD .
- you can see the analysis of earnings by seeing DAILY CHARTS and MONTHLY CHARTS of EARNINGS which is fetched from the database.

A Full Stack Project of TICKET BOOKING

🔗 <https://ticket-book-my-show.netlify.app/>

Project Description

- This page is used to Book tickets in theatre.
- For Frontend REACT app and for Backend MONGODB is used
- full access is given to admin so that he can do CRUD operations for theaters and shows.
- For payment STRIPE package was used.'
- After the show time is completed automatically the shows will removed from the website but not from the database.'
- if one show is created another cannot be created on the same time so that the show time cannot be overlapped.
- In seat booking the white color is not booked ,green color is currently get booking by the user and the red color is the occupied seat.
